Meeting notes

Meeting 1 - 26.09.2024

Objective: Discuss initial project setup, role assignment, and game concept overview.

1. **Attendees:**

- Project Manager
- Environment Designer
- Player Controls Developer
- Enemy and Obstacle Developer
- Shooting Mechanism and Power-Ups Developer
- UI/UX Designer

2. **Agenda:**

- Overview of the 2-week project timeline.
- Role confirmation and responsibilities for each team member.
- Understanding the game mechanics and key features (space shooter, spaceship navigation, enemies, power-ups).
- Review of Unity and C# tools to be used for development.

3. **Decisions:**

- Agreed on using Unity for development and GitHub for version control.
- Decided who will be responsible for which part

4. **Next Steps:**

- Project Manager to create a project plan and assign deadlines for deliverables.
- Environment Designer to start creating the space-themed background and the scrolling effect.
- Player Controls Developer to begin working on the player spaceship GameObject and movement scripts.
- UI/UX designer to begin working on simple drafts of the design

Meeting 2 - 30.09.2024

Objective: Review the UI design, progress on environment design and player controls, begin enemy and obstacle generation.

1. **Attendees:**

- Same as the first meeting.

2. **Agenda:**

- Progress check on environment design and player controls.
- Review of the UI/UX design
- Enemy and obstacle spawning setup.
- Power-ups and shooting mechanism discussion.

3. **Progress:**

- **Environment Design:** Space-themed background created, scrolling effect nearly complete.
- **Player Controls:** Movement and boundary restrictions are functional, some bugs with player input to be fixed.

- **Enemy & Obstacle Generation:** Basic AI for enemies being developed, obstacle prefabs created.
- **UI Design:** Initial drafts for score display, health bar, and main menu created.
- 4. **Next Steps:**
 - Finalize environment scrolling effect by 03.10.2024.
 - Fix bugs in player movement by 03.10.2024.
 - Begin shooting mechanism development.
 - Update the enemy asset in UI design

Meeting 3 - 03.10.2024

Objective: Discuss shooting mechanism implementation, UI setup, and testing plans.

1. **Attendees:**
 - Same team members.
2. **Agenda:**
 - Review shooting mechanism and bullet collision progress.
 - Initial UI design for score display and health bar.
 - Discuss testing and bug-fixing schedule.
3. **Progress:**
 - **Shooting Mechanism:** Bullet prefabs and collision detection implemented.
 - **Power-Ups:** Design discussed; implementation in progress.
4. **Next Steps:**
 - Shooting Mechanism and Power-Ups Developer to finalize power-up effects by 05.10.2024.
 - UI/UX Designer to refine UI elements and integrate them into gameplay by 05.10.2024.
 - Begin internal testing for player controls and shooting mechanism by 06.10.2024.

Meeting 4 - 06.10.2024

Objective: Final review of game features and polish for submission.

1. **Attendees:**
 - Same team members.
2. **Agenda:**
 - Final bug testing and performance optimization.
 - Integrate sound effects and background music.
 - Game over and scoring system review.
3. **Progress:**
 - **Bug Testing:** Major bugs in player movement and bullet collision fixed.
 - **Sound and Music:** Background music and sound effects integrated.
 - **Polishing:** Final optimizations for smoother gameplay.
4. **Next Steps:**
 - Submit the final version of the game and documentation by 06.10.2024.
 - Prepare the project presentation for the submission deadline.

Project Information

Description

This is a space shooter game where players control a spaceship to defeat enemies and collect stars. The player starts with 3 lives and must avoid bombs while earning points by destroying enemies and collecting stars. The game has a simple control scheme and can be won by reaching a score of 500 points. Losing all lives will result in game over. The game also provides a guide section to explain its mechanics and controls.

Workflow

Main Menu:

When the player opens the game, they are presented with two options:

- **Start:** Begins the gameplay loop.
- **Guide:** Takes the player to the guide section.

Guide Section:

The guide section explains the game controls, objective

It may include visuals or simple instructions for clarity:

- Use left and right arrows to move the ship.
- Press space to shoot enemies.
- Avoid bombs to preserve lives.
- Collect stars and destroy enemies to earn points.

Game Start:

- The player starts with 3 lives.
- Enemies spawn on the screen, and the player must destroy them by shooting.
- Bombs appear randomly, and touching a bomb reduces the player's lives.
- The player moves the ship using the arrow keys and shoots using the space key or an on-screen control.

Game Progress:

- Each enemy destroyed awards the player 10 points.
- Stars can also appear, which the player can collect for additional bonuses.
- The game continues until the player reaches 500 points (win condition) or loses all lives (game over).

Game Over:

- If the player wins or loses, a respective screen appears, allowing the player to restart the game or exit.
